Enables users of netViz Enterprise Server to view netViz projects over the Internet via a web browser.

Reduce Mean Time to Repair by Providing Access to Information Anytime, Anywhere

netViz Enterprise Web provides employees at medium and large organizations with easy access to netViz maps and diagrams through any Microsoft or Netscape web browser. In the event of a network outage, users can quickly view, navigate and search network topology maps to find and see key business applications and the associated IT infrastructure. By reducing the time it takes to see and diagnose issues, netViz's Enterprise Web helps companies improve customer satisfaction by reducing mean time to repair.

Raise Efficiency with Powerful Search

Data center operators can drastically improve IT asset utilization rates by detecting stranded assets via a powerful, built-in search engine and reallocating those physical assets. Enterprise Web's search engine also helps operation's staff detect computers, servers or networks on criteria users designate, including object type (e.g. all Cisco 5505 routers in Chicago) or data field (e.g. all PCs, printers that cost more than $5,000.)

Enforce Policy via Powerful Links

With the click of a mouse, users can open policy and procedure documents associated with a business process and a physical asset. These powerful links can open a related web page, important policy document, an Excel spreadsheet or a PDF file, helping to enforce policy.

Decrease Operator Error by Improving Employee Communication

By enabling users to see notes and annotations online, netViz Enterprise Web improves communication between key stakeholders, increasing awareness of recent and pending changes to IT infrastructure and related business processes. By increasing knowledge of changes, administrators can keep key stakeholders informed while at the same time restricting access to configuration consoles, reducing operator errors.

netViz Enterprise Server

Business service problems, including IT downtime, are in most cases due to an improper change or human error. When a problem does occur, the majority of the time to resolve is spent on locating the source. netViz Enterprise Server is a powerful solution to this problem. Use it to manage your business and monitor the changes that are taking place.

- Makes it easy to find networks, servers or other objects through a powerful, built-in search engine.

- Improves security by enforcing strict access rules and permissions for each netViz project or netViz diagram.

- Increases business intelligence through sophisticated capabilities for filtering, viewing, navigating and interpreting large sets of complex data.
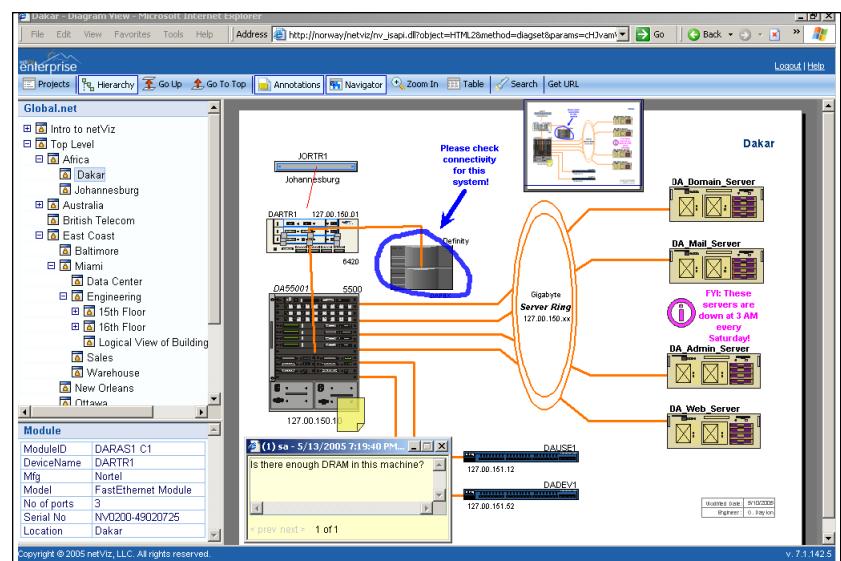

▲ *netViz Enterprise Web shows the relationships and dependencies of information online through a standard browser*
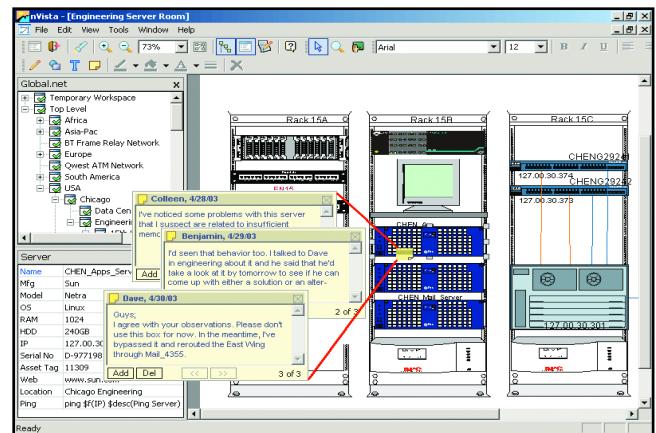

▲ *Regardless if one is using the netViz Enterprise client or netViz Enterprise Web, the same level of information is available to each. Using a browser you can turn on/off the collaboration notes, perform searches, or drill down to subcomponents, and see changes in the environment in real-time.*

netViz® Enterprise Web

netViz Enterprise Project Author

netViz Enterprise Project Author, enables business owners to accelerate decision making by allowing them to find information more quickly. Through netViz, customers can create powerful data-driven graphics, distribute the graphics via the web, collaborate, and effectively manage changes. This set of powerful components and features make netViz unique, and a solution that organizations, including many Fortune 1000 companies, rely on everyday to manage their business.

netViz Enterprise Adapters

netViz Adapters make it easy to connect netViz to external data sources. The consolidation of enterprise information and technology information make it easy to better understand the business and make critical decisions.

netViz Enterprise Client

With netViz Enterprise Client, users can mark up and annotate diagrams right from their desktop without altering the netViz Enterprise project data. All annotations are viewable by others in real time to allow rich communication across the enterprise.

▶ *netViz Enterprise's powerful security capabilities provides five levels of security to ensure the right people access, annotate, edit and delete information, purely online.*
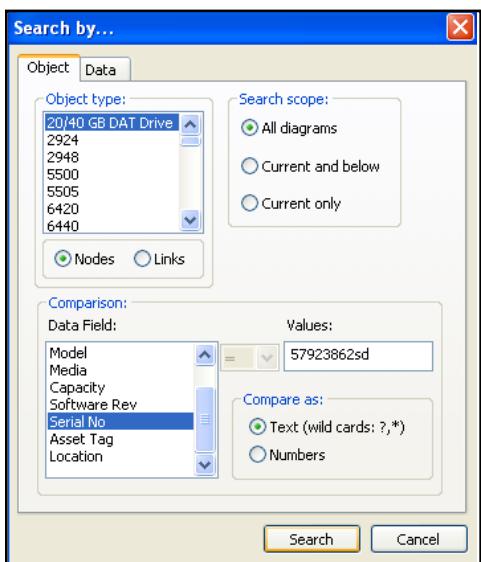

▲ *Stakeholders quickly understand capacity requirements and other important trends through powerful, multi-criteria, browser-based search capabilities.*
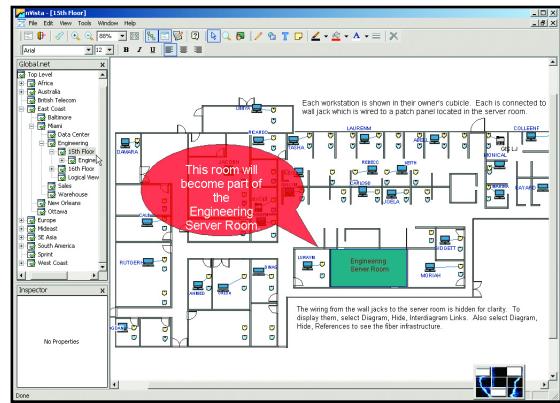

▶*netViz Enterprise Client provides the same level of drill-downs, data display, collaborative note views and functionally as netViz Enterprise clients, but without the need to install any software.*
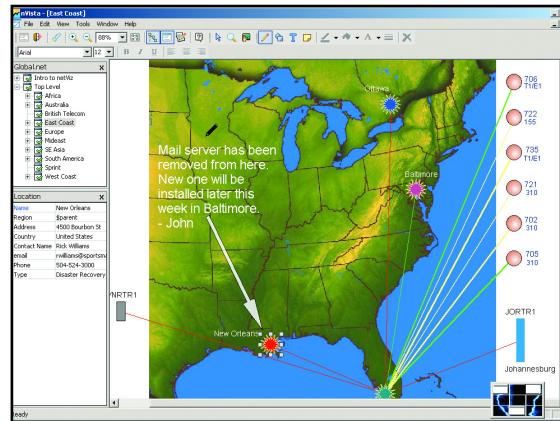

Key Functions

Browser based views—Provides access to all netViz diagrams online.

Data-Embedded Graphics—Each object in netViz can have an unlimited number of custom data fields associated with it.

Distributed—Available from anywhere.

Real-time Collaboration—Ability to view annotations directly on the diagrams in real-time.

Management of Changes—bility to see and record all changes taking place in the environment by the individual data owners.

Troubleshooting—Able to trouble-shoot problems easily with the centralized repository and accessible diagrams.

Consolidation of Enterprise Data—Able to consolidate any data, and explain their relationships.

Access Control—Powerful multi-level access control allows the right users to access the right information.
